

## About Paul Fellows

Having built his first telescope aged 14 and experiencing the “wow” moment of seeing the rings of Saturn for the first time, he has been stargazing for some 40 years and has his own private observatory where he images the sky, taking pictures of galaxies, clusters, nebulae and planets. Many of his own images will appear in his talks.

Paul holds a Master’s degree in natural sciences and a post-graduate degree in computer science from the University of Cambridge, and is a Fellow of the Institute of Engineering and Technology, A Fellow of the Royal Astronomical Society, and chairman of the Cambridge Astronomical Association.

Paul co-presents the public observing evenings at the University of Cambridge, leading the live outdoor shows every week or giving indoor presentations when the clouds roll in! Either way these attract audiences of 200+ on a regular basis and are aimed to appeal to people of all levels from the complete beginner who wants to know where to start, yet hopefully adding something even for the more knowledgeable.

He is also a regular speaker on board Queen Mary 2 for Cunard Line.
